

THE SOLUTION DESIGN GROUP, INC.

CapitalVision® Version 10.8.1 Released

Orlando, FL – January 5, 2011 — **The Solution Design Group, Inc. (SDG)** is pleased to announce that the latest release of **CapitalVision®** (Version 10.8.1) is now available. Major new features of this release include the ability to allocate capitalized interest income and a new program/project detail report providing the CIP “book” of detailed project information.

CapitalVision® simplifies the complex relationships between funding sources (grants, bonds, user fees, etc.) and the related projects, assets, and contracts managed in a capital program. CapitalVision® is an affordable investment and available as a subscription-based service or enterprise license. With the subscription service, SDG handles the hardware, operating system, database licenses, and other requirements making it easy own and implement. As a secure web-based system, the only equipment required to use CapitalVision® is a computer with a browser and a connection to the Internet.

CapitalVision® saves time and money, provides transparency in your organization and prevents costly errors in managing your capital program. Complicated and time-consuming calculations such as the allocation of capitalized interest expense and income are performed in seconds. Historical information pertaining to a capital program is tracked and easily maintained in a single repository allowing for prompt access to allow for refunding a draw or tracking subcontractors and DBE performance on a specific project or contract.

CapitalVision® produces on-demand, customizable reports that range from high-level CIP planning reports to detailed expense reports. Additionally, the system allows management and users to be proactive in all aspects of managing capital programs with “alerts.” Alerts notify managers and users of specific events that may require attention, such as change orders that exceed a certain threshold, upcoming funding application dates, funding source nearing depletion, et cetera.

New features presented in CapitalVision® 10.8.1 include:

- The ability to add and assign a photograph to represent a project.
- The ability to allocate capitalized interest income to one or more projects.
- A new activity stream information widget that displays username, type of activity, and when the activity was performed.
- Enhancements to the error logging capability of the data loader.
- A new Program Project Detail Report that provides a comprehensive “book” of projects associated with a program. The project information includes vital information such as project name and photograph, project dates, budget totals per year, expenses per year, and all associated funding sources and amounts.
- New Funding Source Work in Progress Summary Report that details the work in progress for a funding source for each associated project. It also includes the total amount capitalized to date.

CapitalVision® is available directly from SDG or through the GSA Schedule 70.

About The Solution Design Group, Inc. (SDG) - SDG is a software development and information technology consulting firm that focuses on capital program management for the government and transportation market. The principals of SDG have over 75 years of collective experience in the transportation industry and have provided software or services for nearly 100 different transportation and government clients around the world.
