### CapitalVision® Version 10.8 Now Tracks Budgets by Project or Funding Source

**Orlando, FL - September 29, 2010** — **The Solution Design Group, Inc. (SDG)** is pleased to announce that the latest release of **CapitalVision®** (Version 10.8) is now available. Major new features included with this release are the ability to manage budgets for funding sources and projects, track budget adjustments, and a new “alert creation” wizard.

“The tracking of budgets from the project or the funding source provides the detail and flexibility necessary for today’s fiscal challenges and responsibilities. The ability to view all adjustments to budgets will easily provide the level of transparency typically desired by stakeholders,” stated SDG President and CEO, Tom Strange.

Managing the complexities and adjustments of budgets has never been easier than with CapitalVision®, which provides the ability to track budgets at the account code or line item level for multiple time periods. CapitalVision® preserves the history of any adjustments to a budget to aid in the audit process. Funding source budgets can also be monitored or enforced when creating funding draws through CapitalVision® to help prevent an overdraw of funds.

Creating alerts with varying degrees of complexity in CapitalVision® is enhanced with the new release. The new “alert creation” wizard provides management and users with the opportunity to be proactive in the management of their capital program. Alerts are messages that notify stakeholders of specific events that may require attention, such as change orders that exceed a certain threshold, upcoming funding application dates, a funding source nearing depletion, et cetera. In addition to on-screen notification, alerts can also be delivered via email.

Other new features in Version 10.8 include several new reports as well as a new contract data loading feature and published web service for integrating with other project/contract management tools.

CapitalVision® simplifies the complex relationships between funding sources (grants, bonds, user fees, commercial paper, etc.) and the related projects, assets, and contracts managed in a capital program. CapitalVision® is an affordable investment that is available as a subscription-based “software as a service” model, or as an enterprise license. As a secure and completely web-based system, the only equipment needed for any CapitalVision® user is a computer with a browser and a connection to the Internet.

CapitalVision® is available directly from SDG or through the GSA Schedule 70 ([www.gsaadvantage.gov](http://www.gsaadvantage.gov)).

**About The Solution Design Group, Inc. (SDG)** - SDG is a software development and information technology consulting firm that focuses on capital program management for the government market. The principals of SDG have over 75 years of collective experience in the transportation industry and have provided software or services for nearly 100 different transportation and government clients around the world.
